

Business Card

Business Card Featured list Document

Version 1.0

Overview :

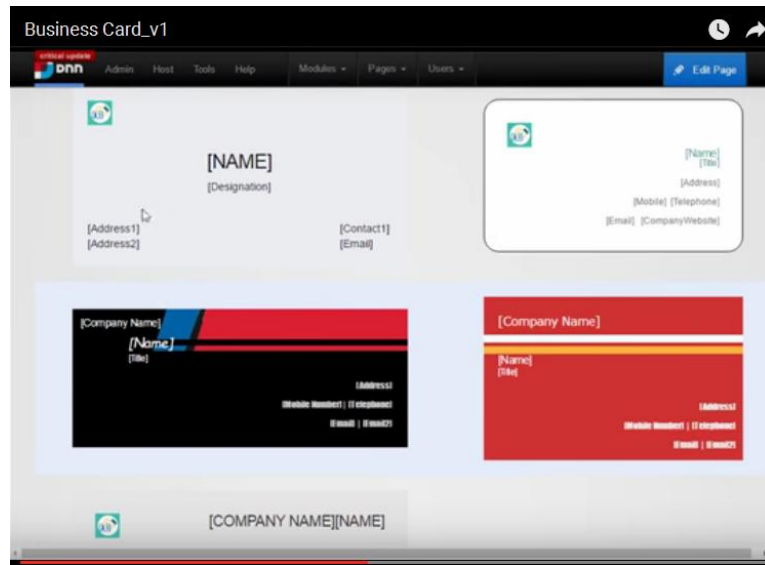

Business card module helps you create a personalized business card which a user can create and keep on his DNN site and can create and keep on his Dnn site and send a colorful card through the mail.

Feature List :

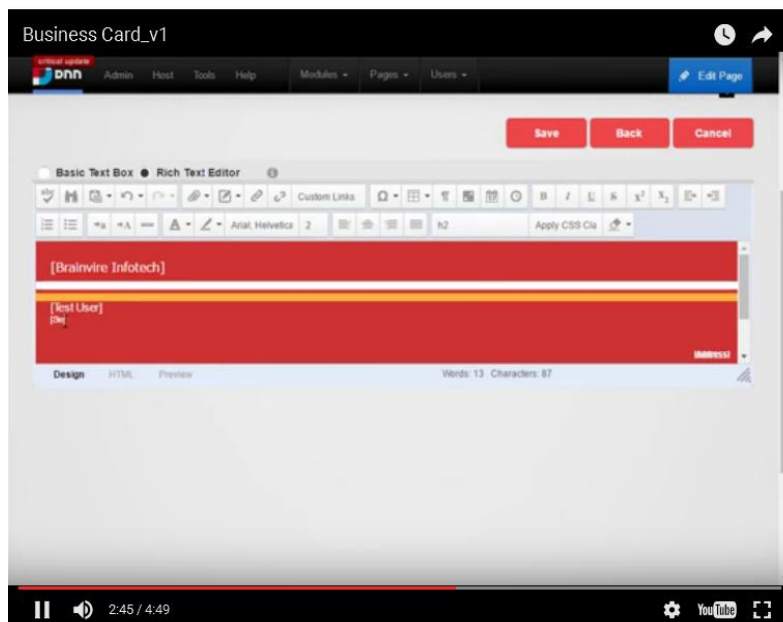

1. User can Add , Edit and Delete the cards
 - The user can create new cards , edit the existing template or the business card user previously created and delete the added /edited cards.
2. User can Navigate through the cards one by one on the Main Page
 - When a user wants to create a Business card he can view the cards that are created by the user and which he wishes to share with someone.
 - If the user have created multiple cards then all the cards are displayed at the main page of which he can navigate and view the card to be shared
3. User can also select the built in templates for the Card or create his/her own Design for the Card.
 - In this module the user is provided with the built-in templates of card where he can select the template and just edit the details and use the card.
 - In case the user wants to create the new card instead of using the available templates then he can also do the same using blank card and create the card of his own.
 - If the user wants to add the logo of his choice he can add using the image option given.
4. User can send the card to multiple email addresses at the same time.
 - Ones the user have created the Business Card and saved he can view in the main page.
 - User can share the cards by sending it in mail to many people by adding the email-id or multiple email id at same time
