

Online Test

Online Test Featured list Document Version 1.0

Overview :

The Online Test module gives the users the ease of setting up tests for their users. Targeted for interviews in an organization, the module supports setting up "Test Types" which act as a Group. Each Group can host n-number of questions under it. Each Question can have multiple choices for the user with one correct answer.

The Test is time bound and authorized user can set the module configuration for the maximum number of Questions to appear along with the maximum time that a user can have to attempt a Test. While not making things too complicated, Online Test captures the basic needs of an user test to measure the candidate's knowledge.

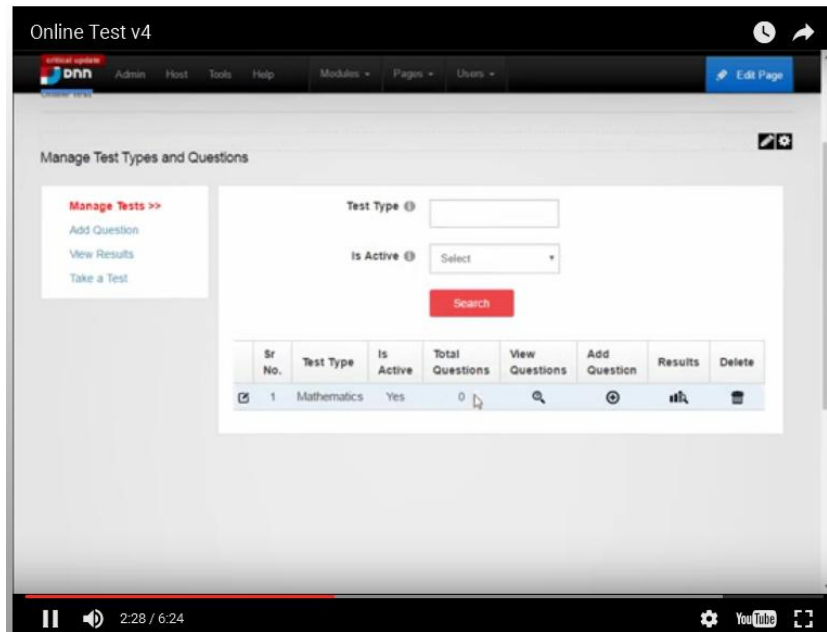

Forthcoming updates will feature more functions like PDF printing, image support in Questions, multiple correct answers, etc.

Feature List :

1. User can manage tests
 - The admin user when logs in he needs to click on edit page option from where he gets the options to manage tests.
 - From the edit option given the admin can add different test types .
 - Add Question gives the admin access to add n number of questions to a particular test type he selects.
 - As the user add questions to the test he can add the options as well for that particular question and also mark the correct answer in the system which will then be used to evaluate results of the test.
2. User can see total number of questions
 - User can also view the number of question he has added to which test type and edit the test further if need.
3. User can view detail result.
 - The admin user can view result in detail to check which option is selected for which question and which is the correct option.
 - Also the page displays the details of the person who appeared for test
 - The user can delete the result which will delete the record of the user applied for test
4. User can apply for test.
 - The user who is supposed to appear the test can apply for test clicking on take test where he has to enter his details and then he is navigated to page which displays start test
 - Ones the user starts test he can start answering the question and has to complete the test within the time limit set by the admin
 - After the test is completed t pages displays the result showing number of questions answered correctly and percentage
